

SAINTY Aluminum Hung Window

Full name :Insulation design single and double hung window with grids

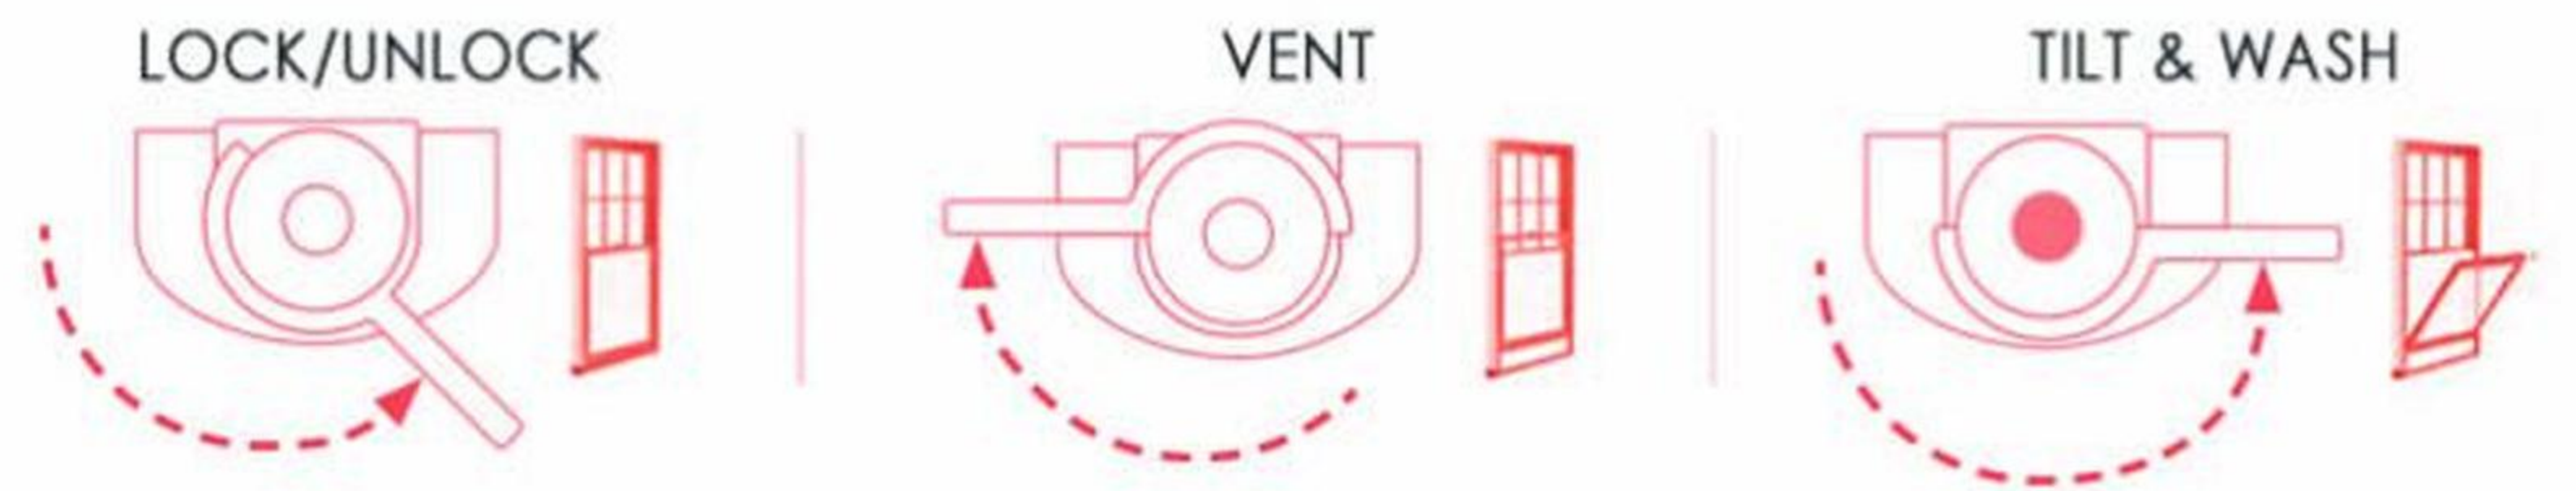

- Window weight up to 100 kg
- Dimensions up to 1000 mm wide and 2000 mm high.

Vertical sliding windows do not protrude outward when opened, making them ideal for areas with limited space or narrow walkways. They are a great choice for both residential and commercial buildings where maximizing floor space is important.

Lock

The primary advantage of a lock in any window, including aluminum vertical sliding windows, is enhanced security. A properly functioning lock prevents unauthorized access, making it more difficult for intruders to enter your property. It provides peace of mind and helps protect your home or office from potential break-ins.

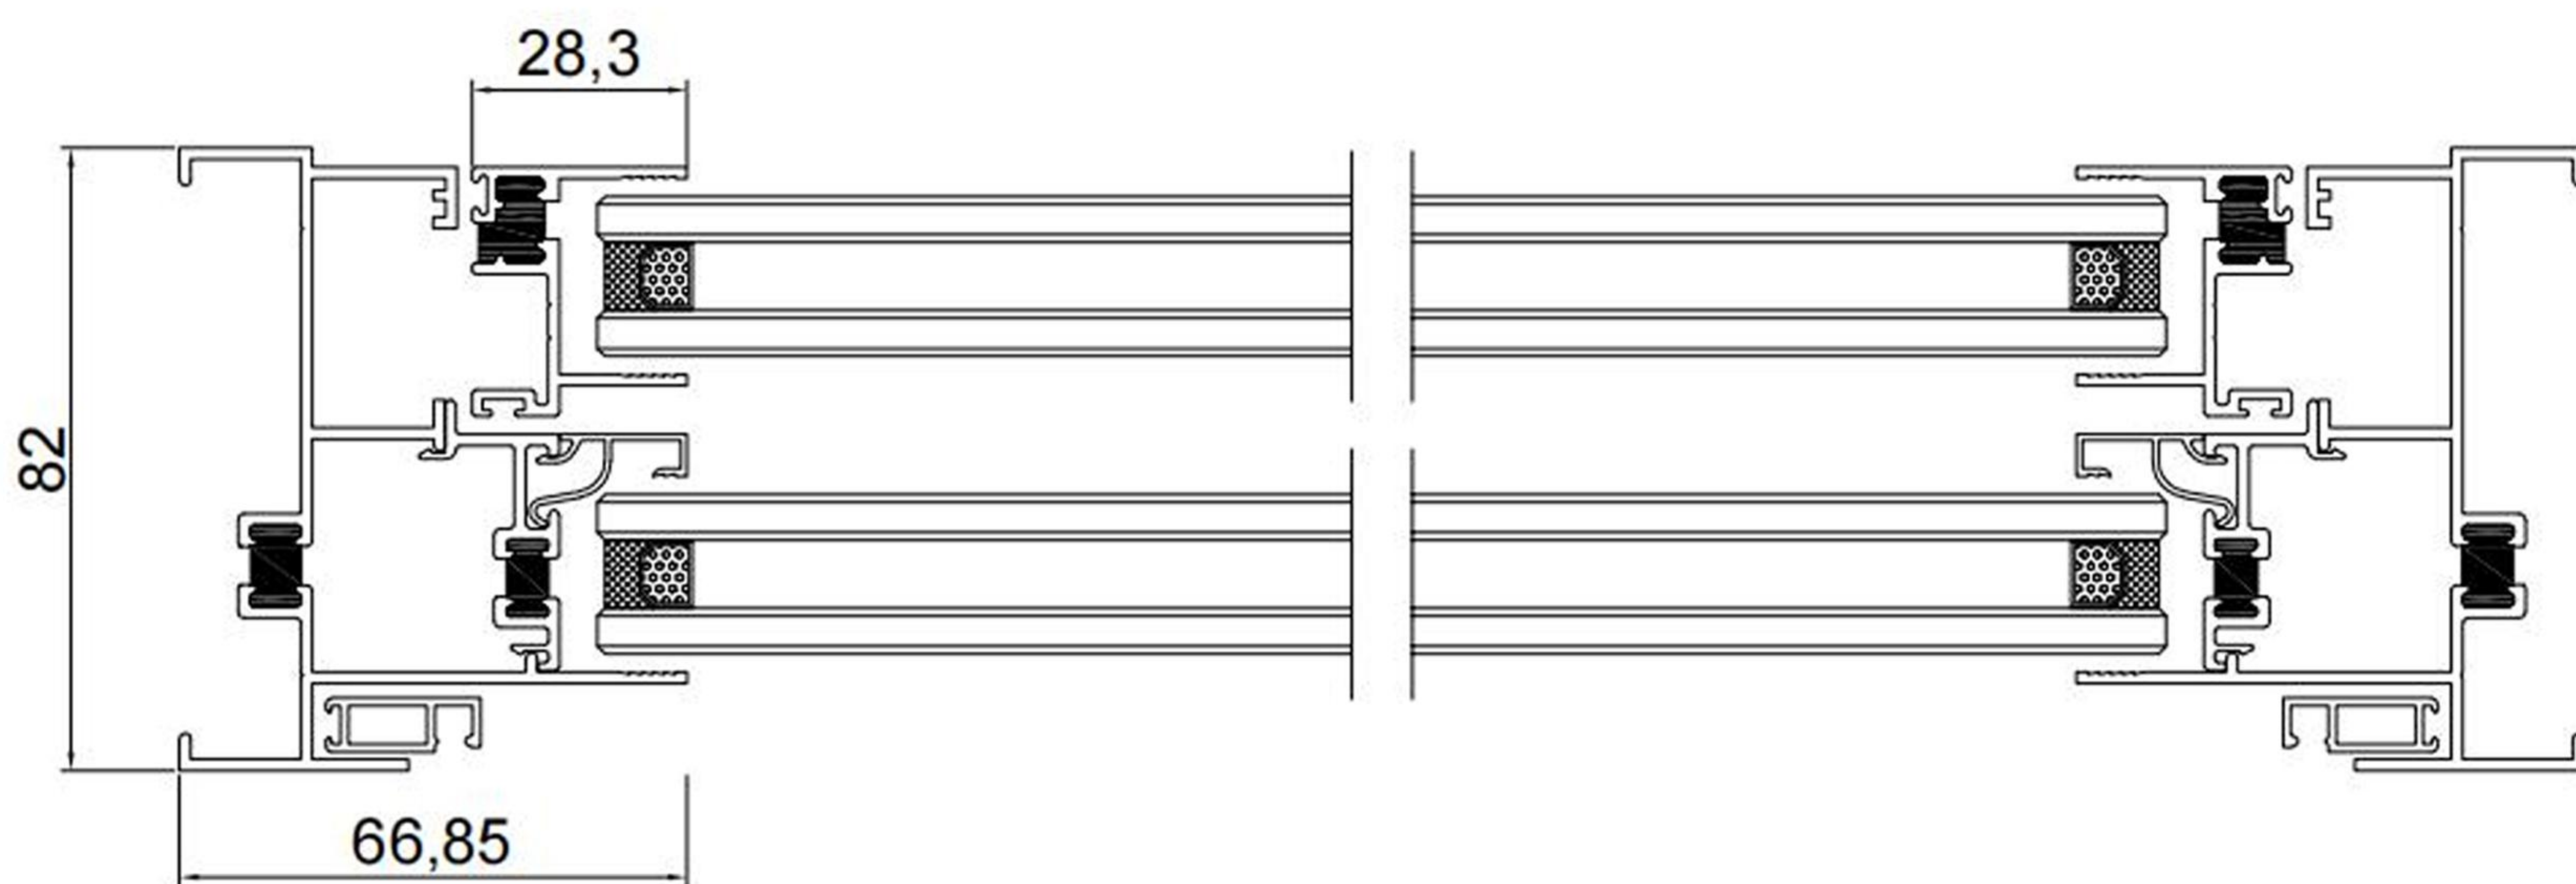

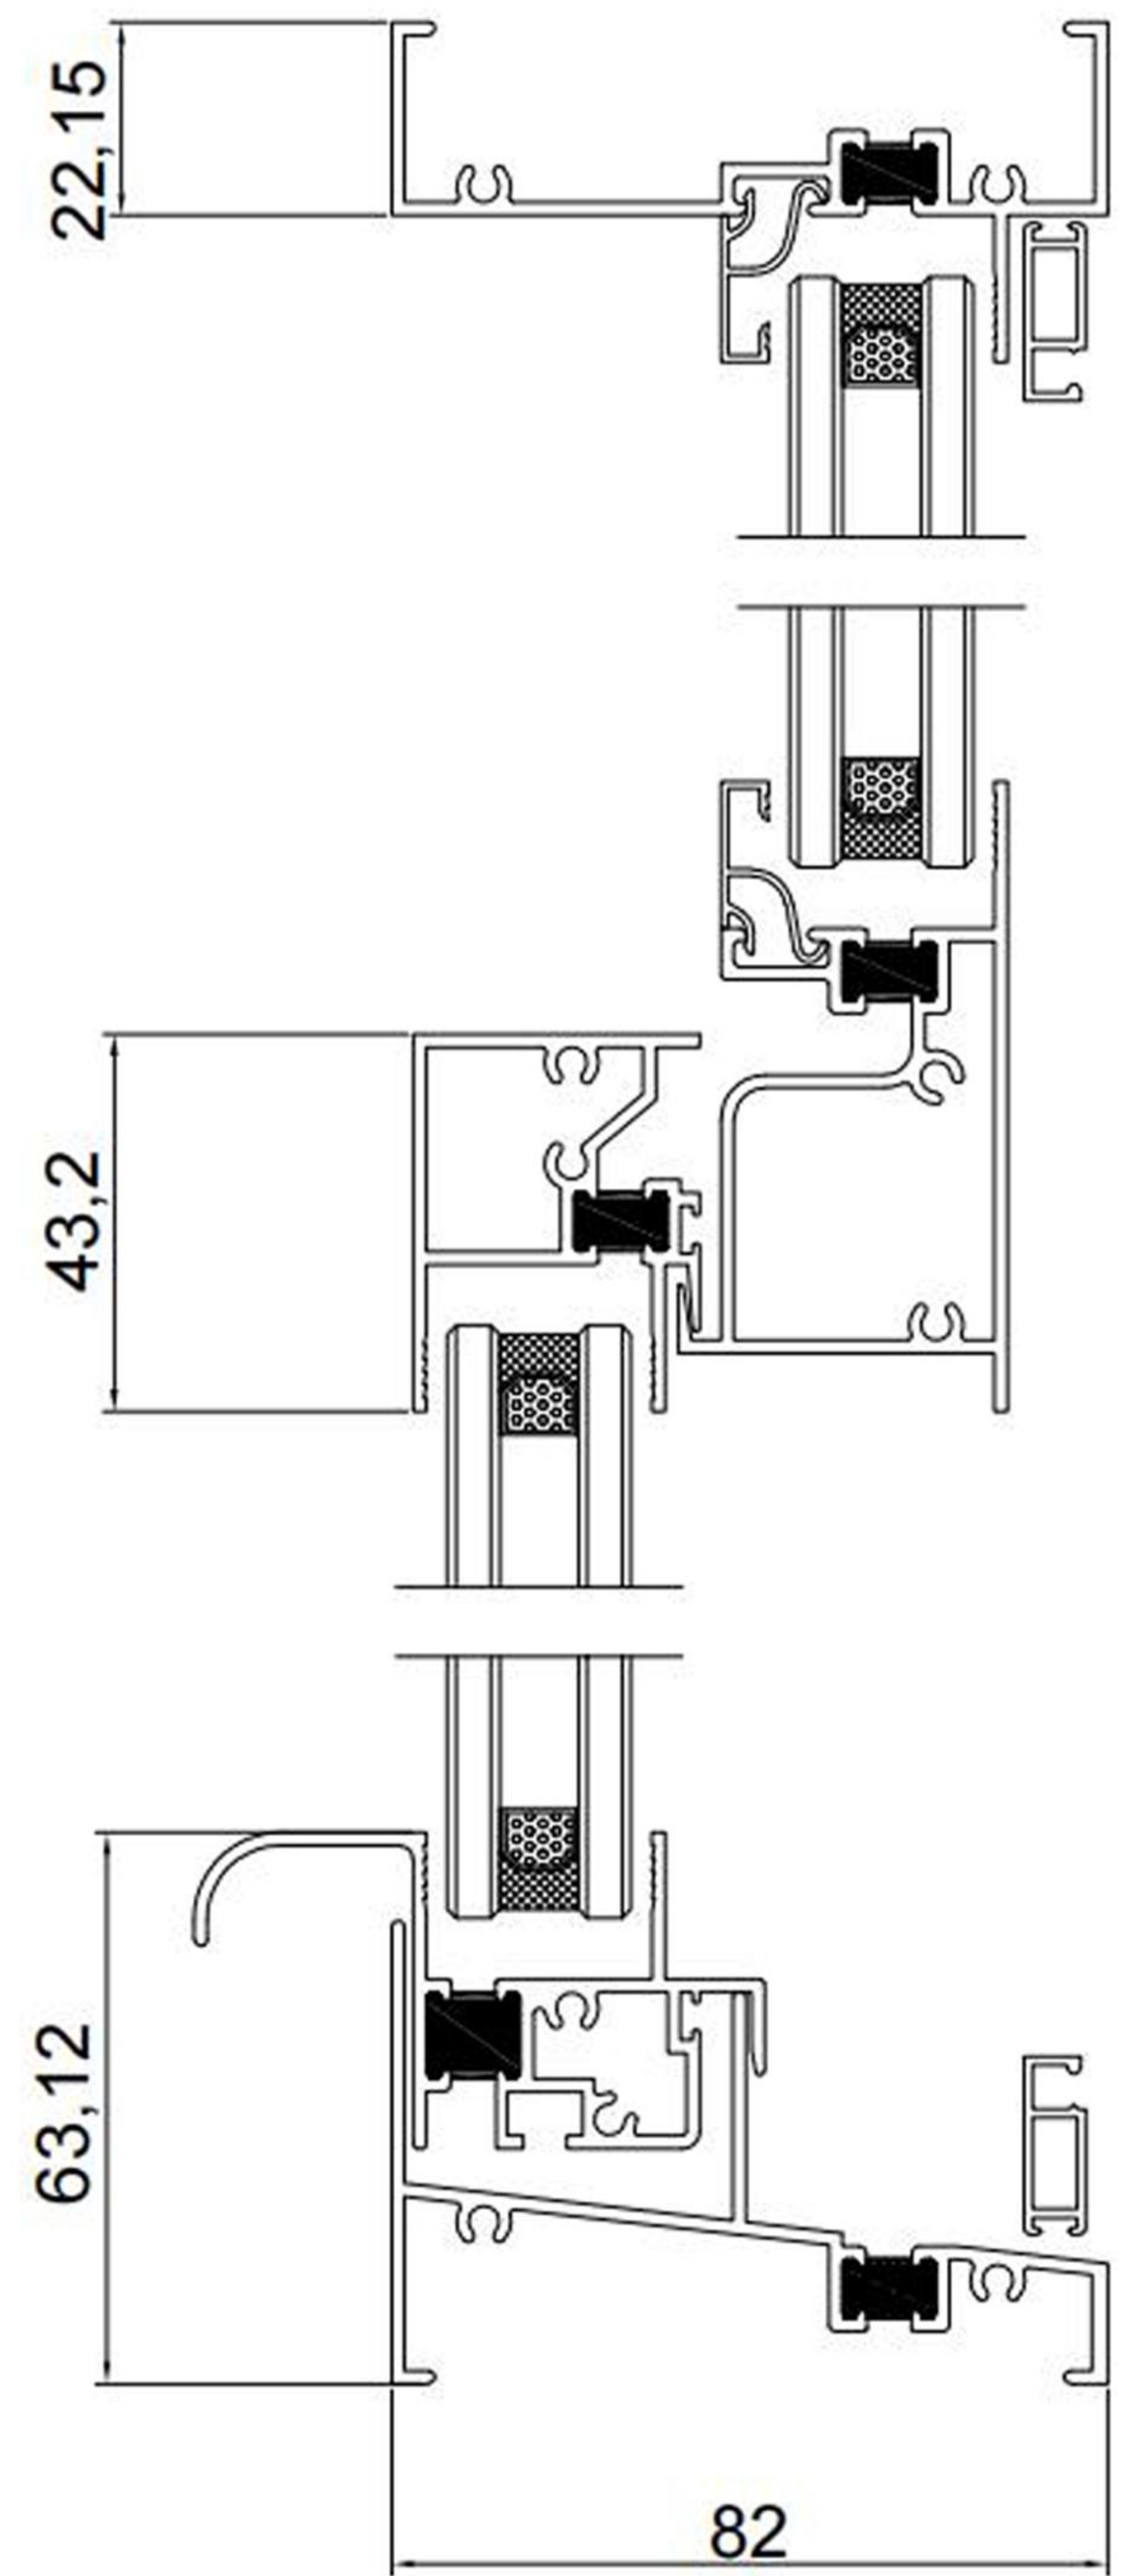

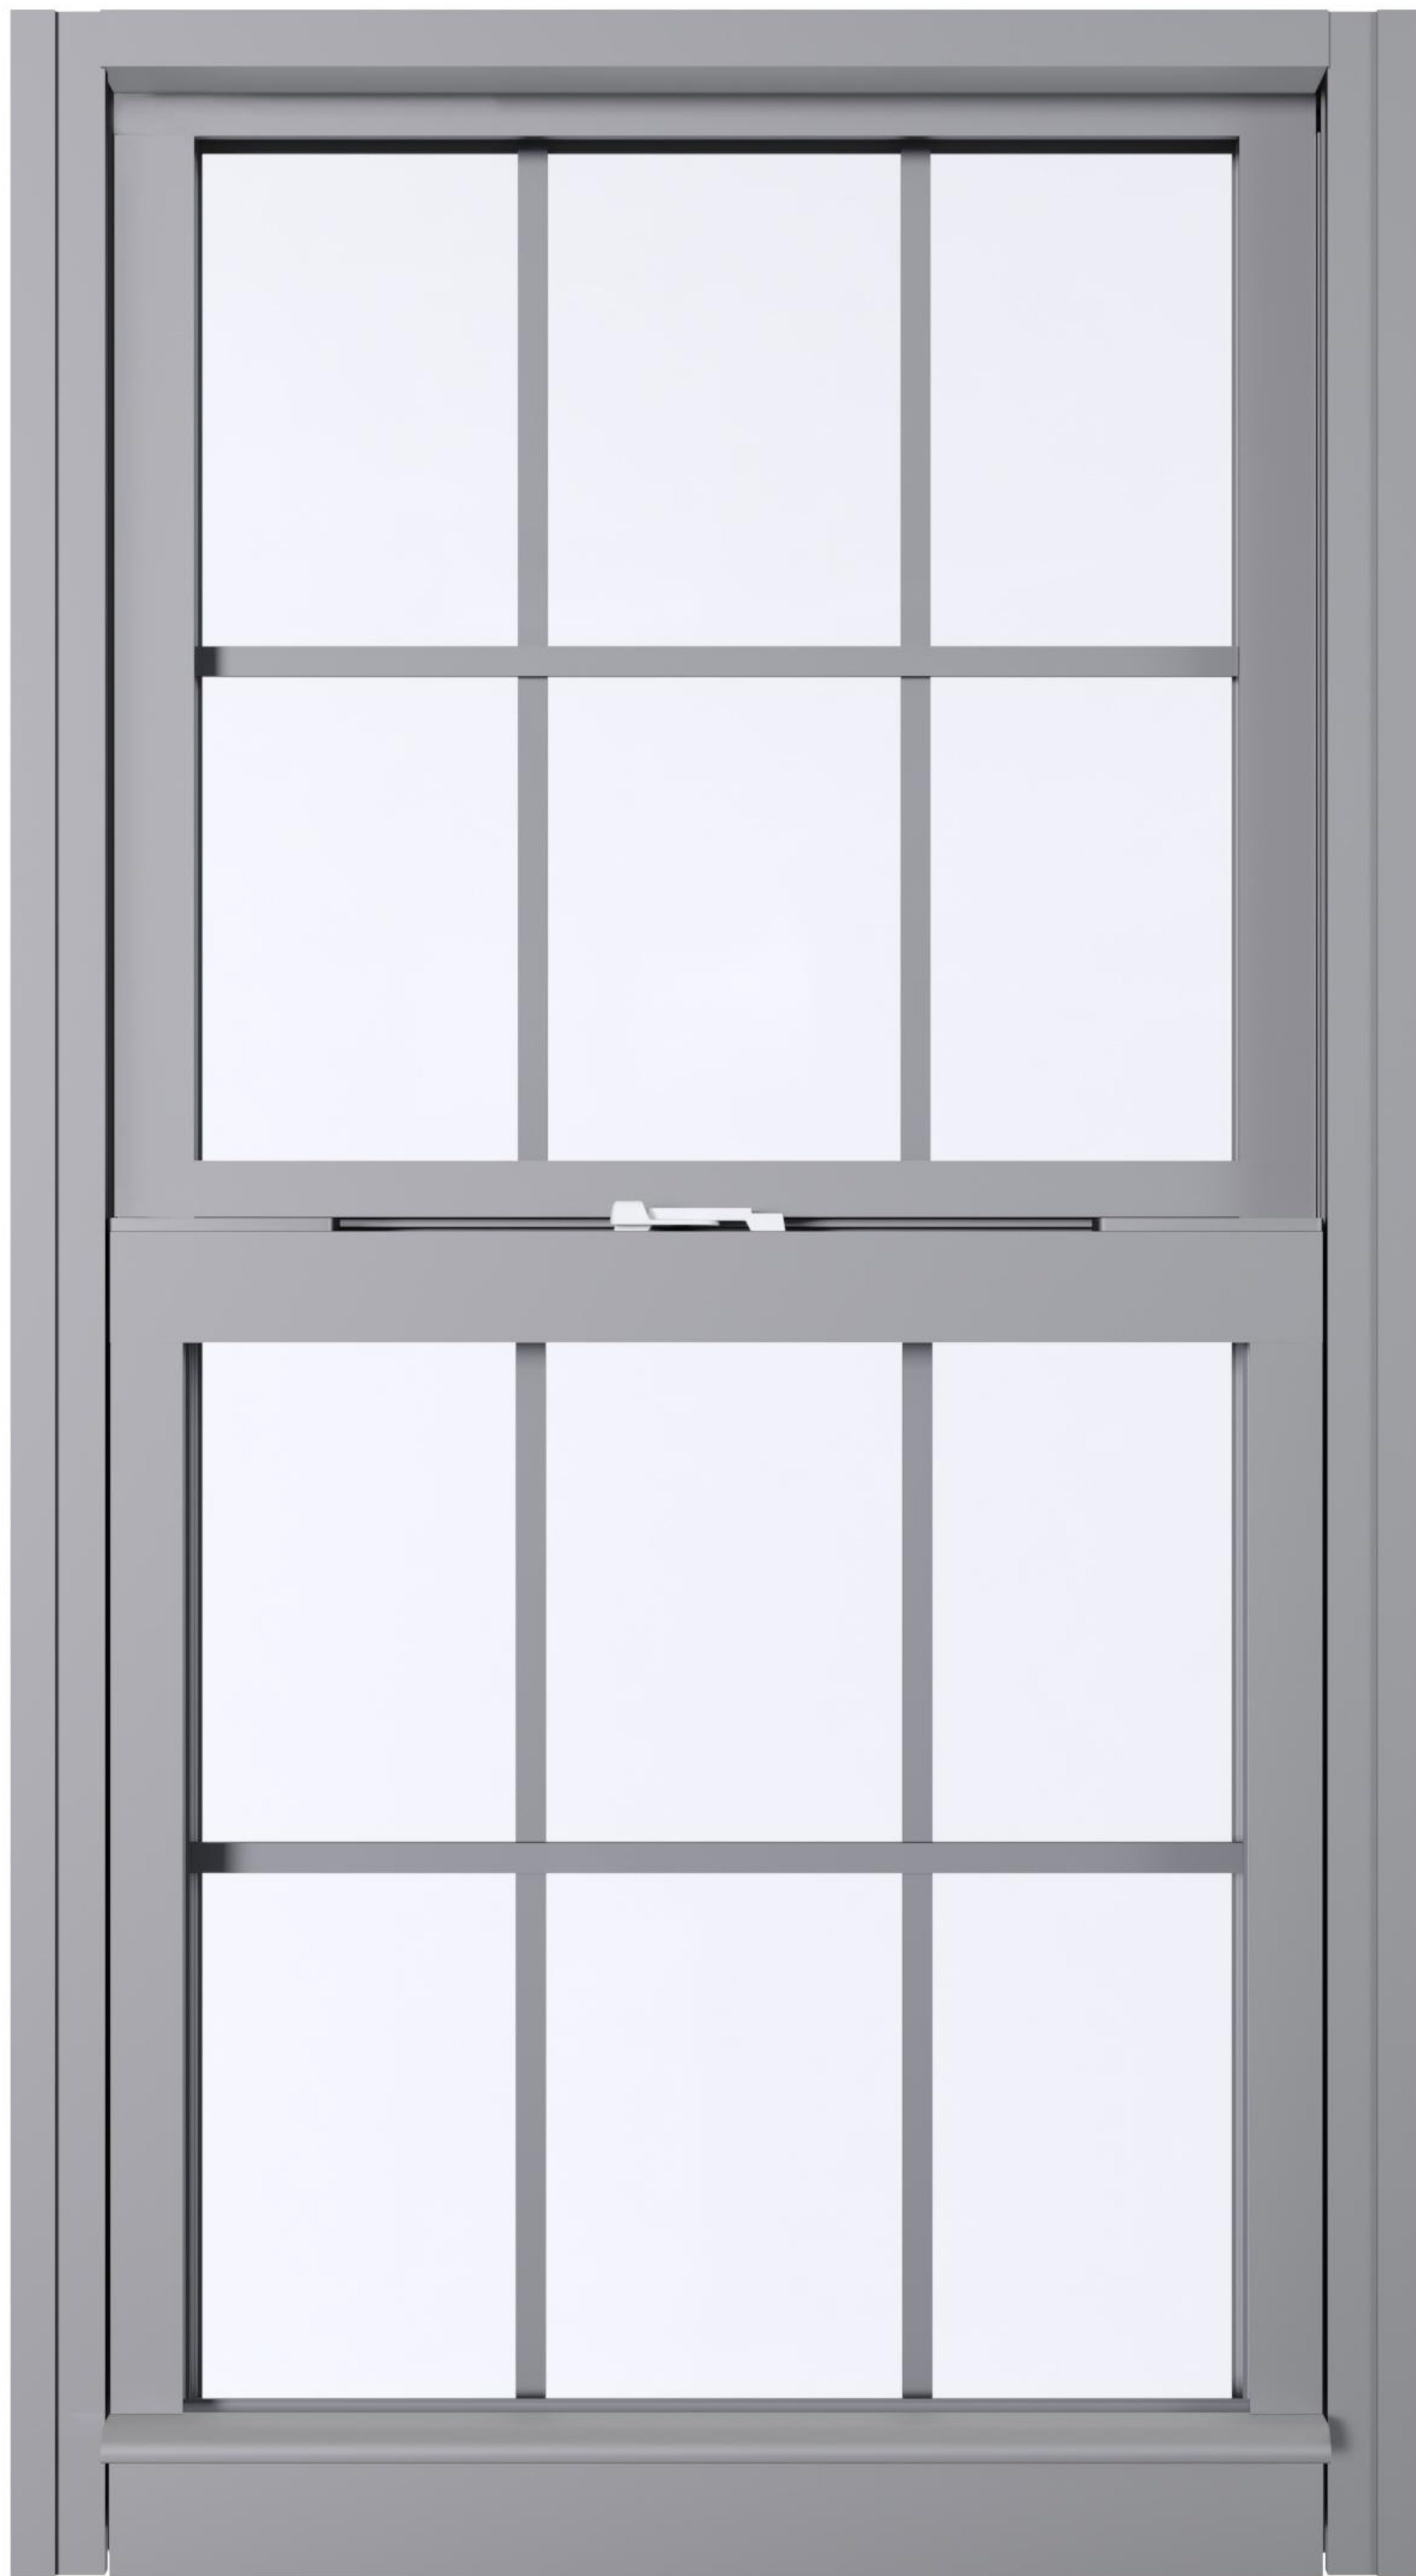

Mesh

The addition of mesh screens further enhances security by acting as a barrier against insects, while still allowing for ventilation.

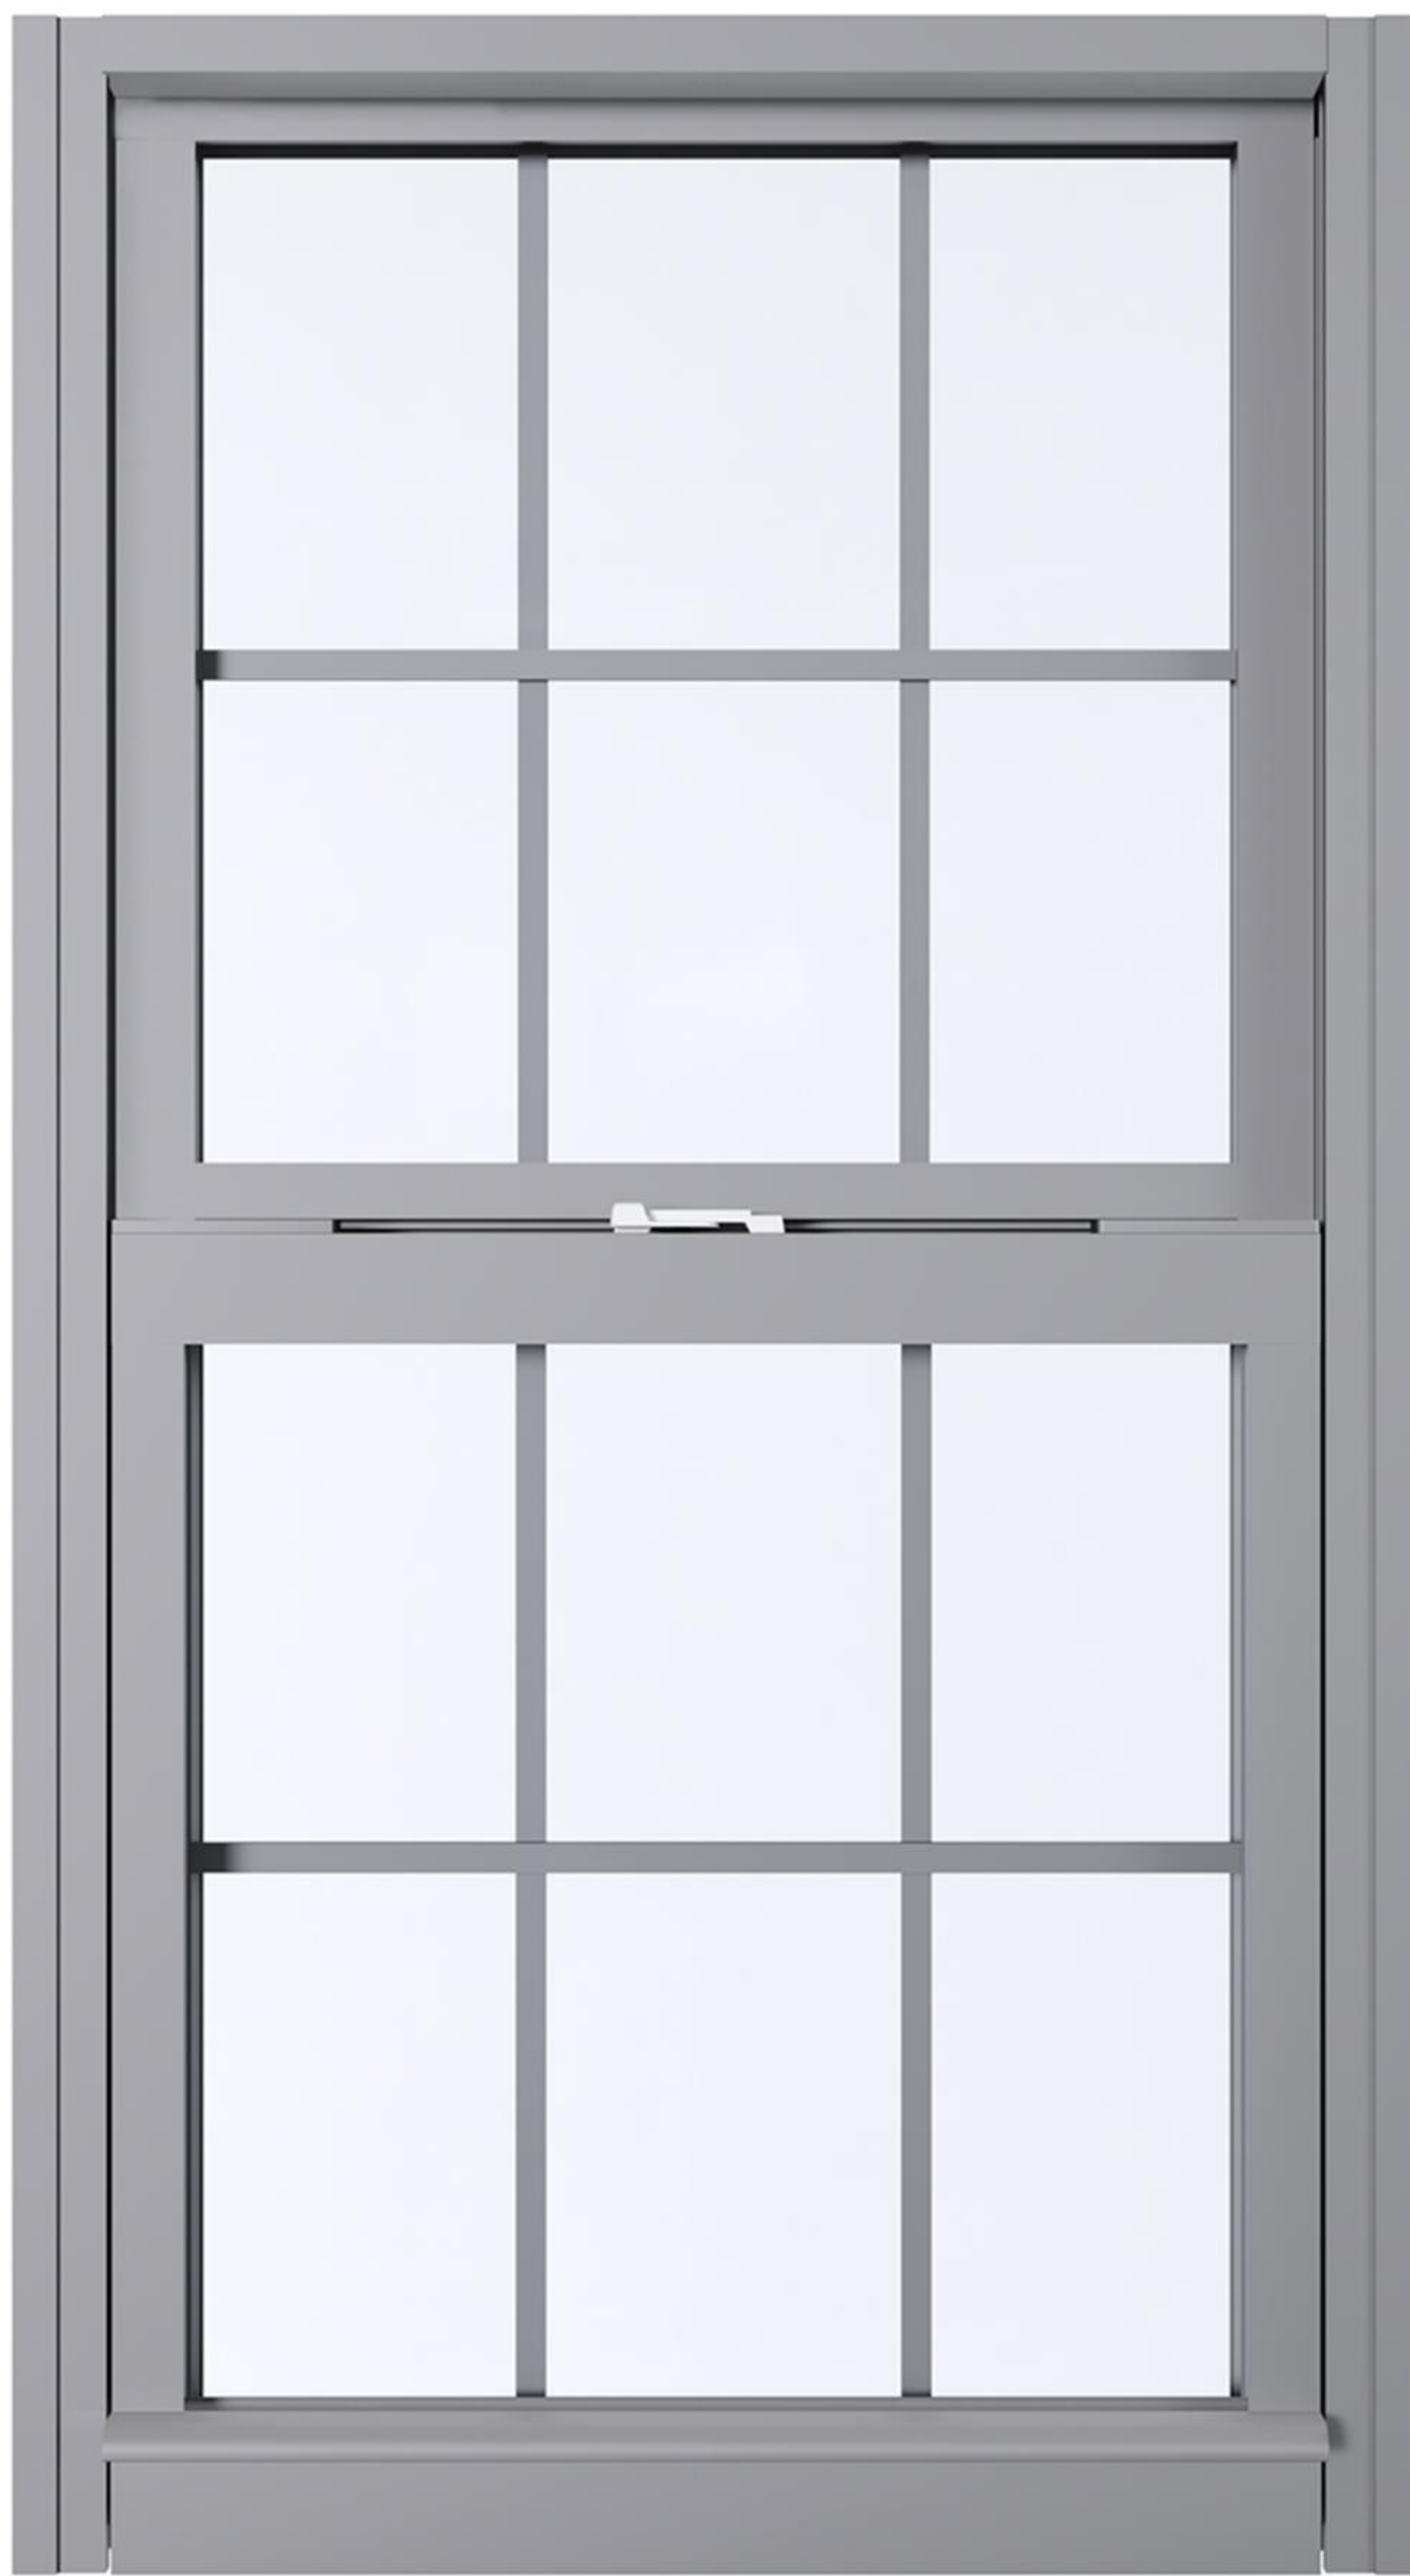

Certified by CE/AAMA/CSA

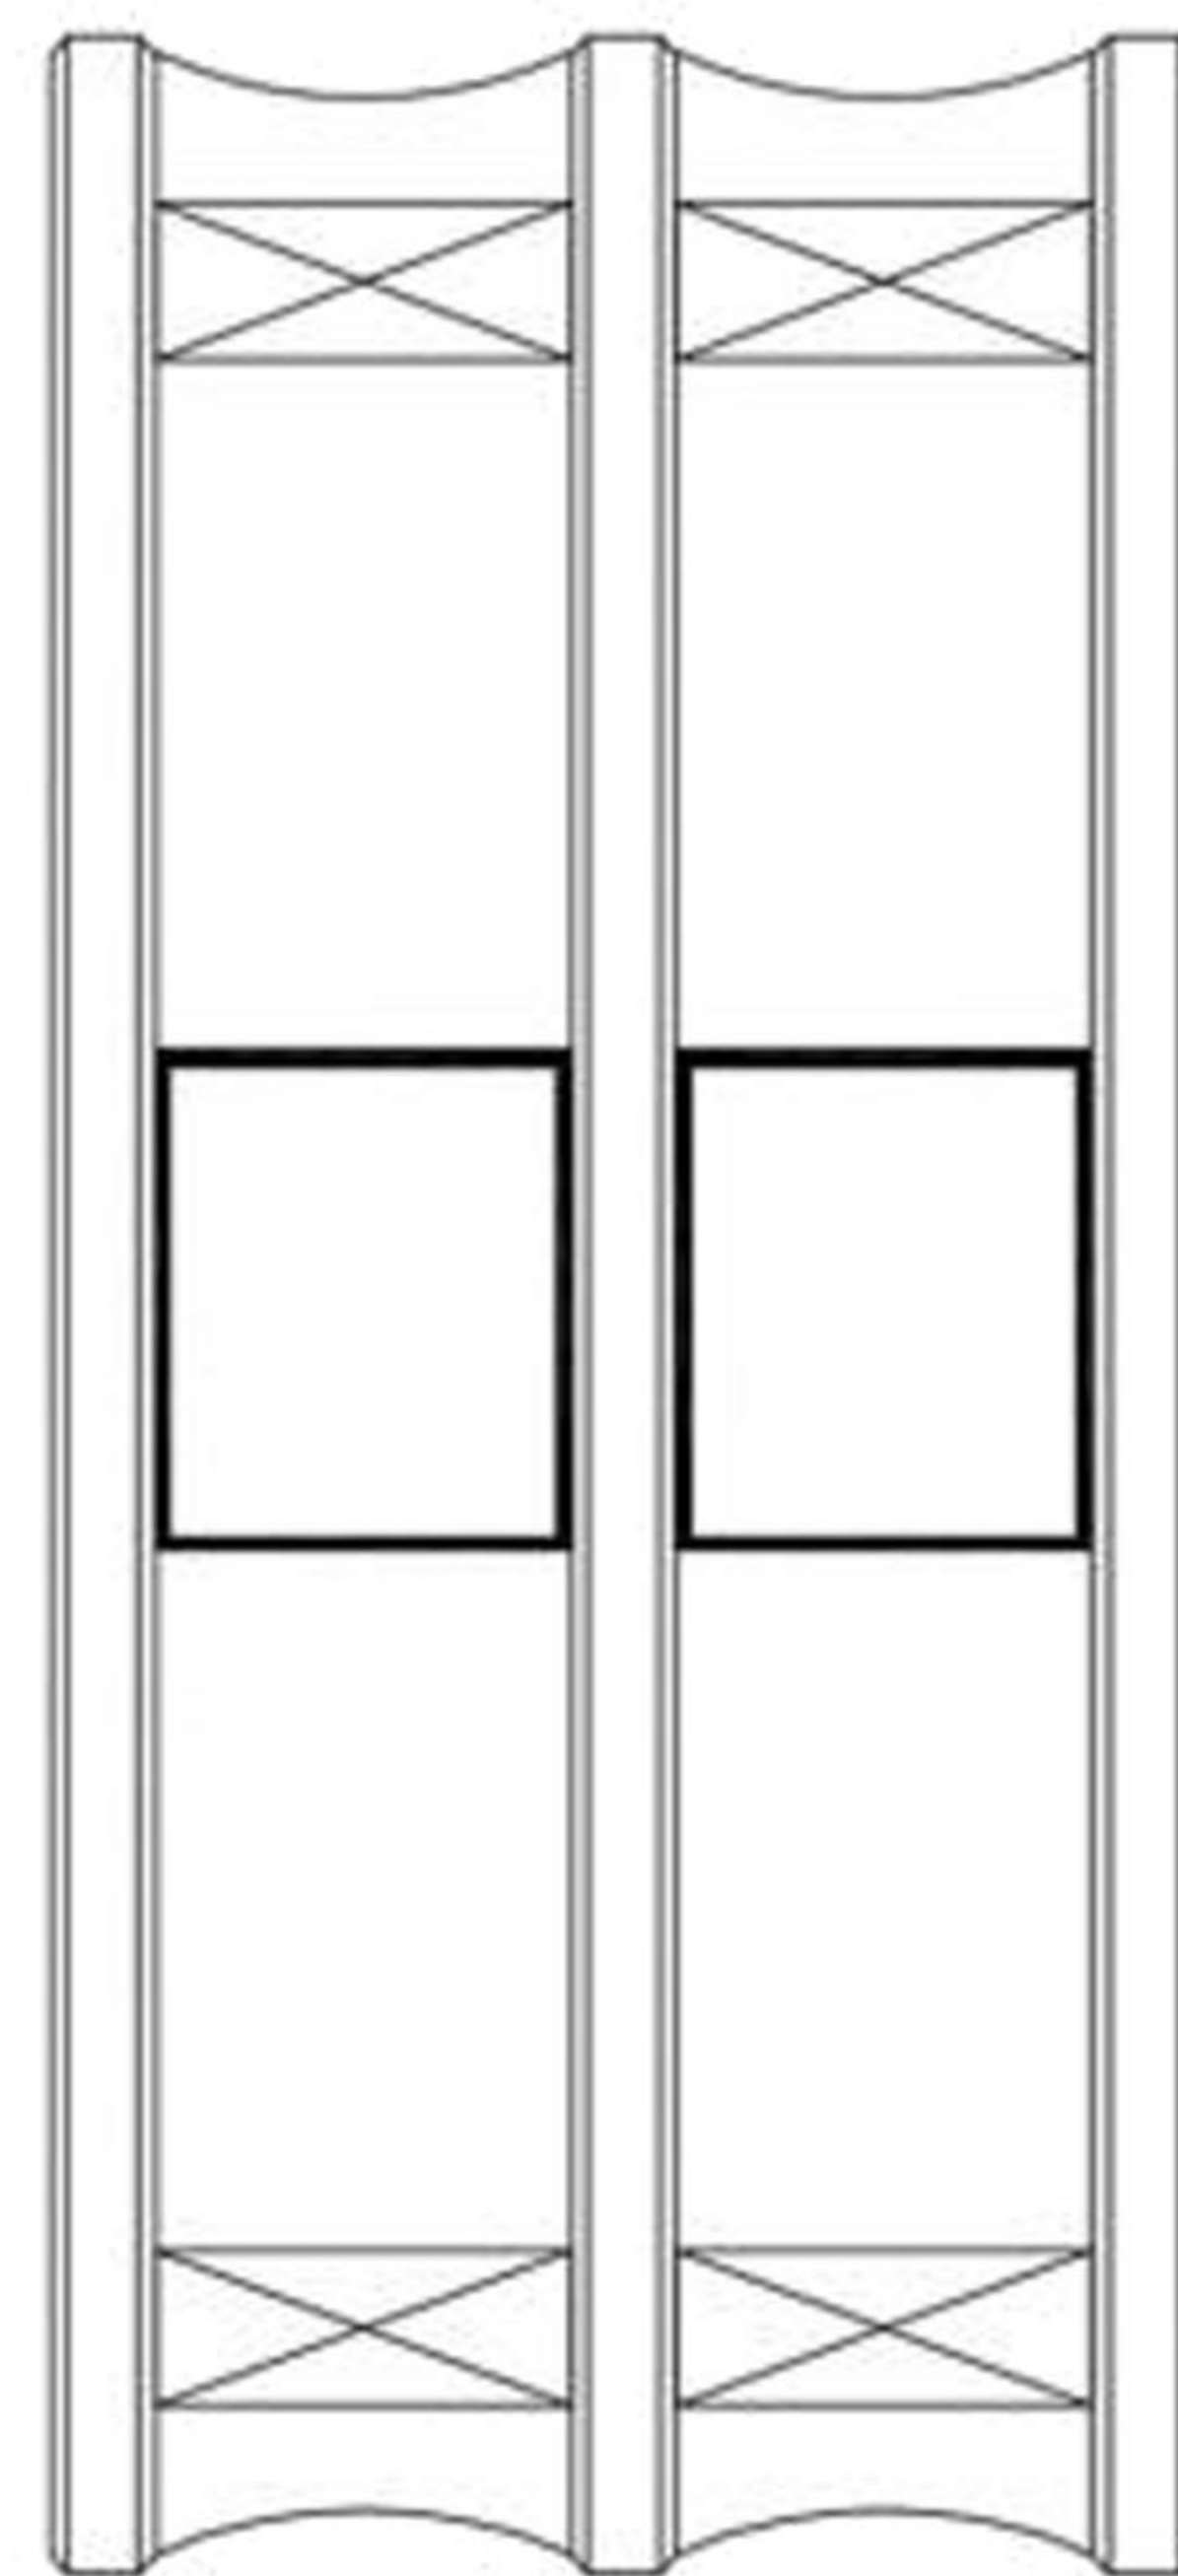

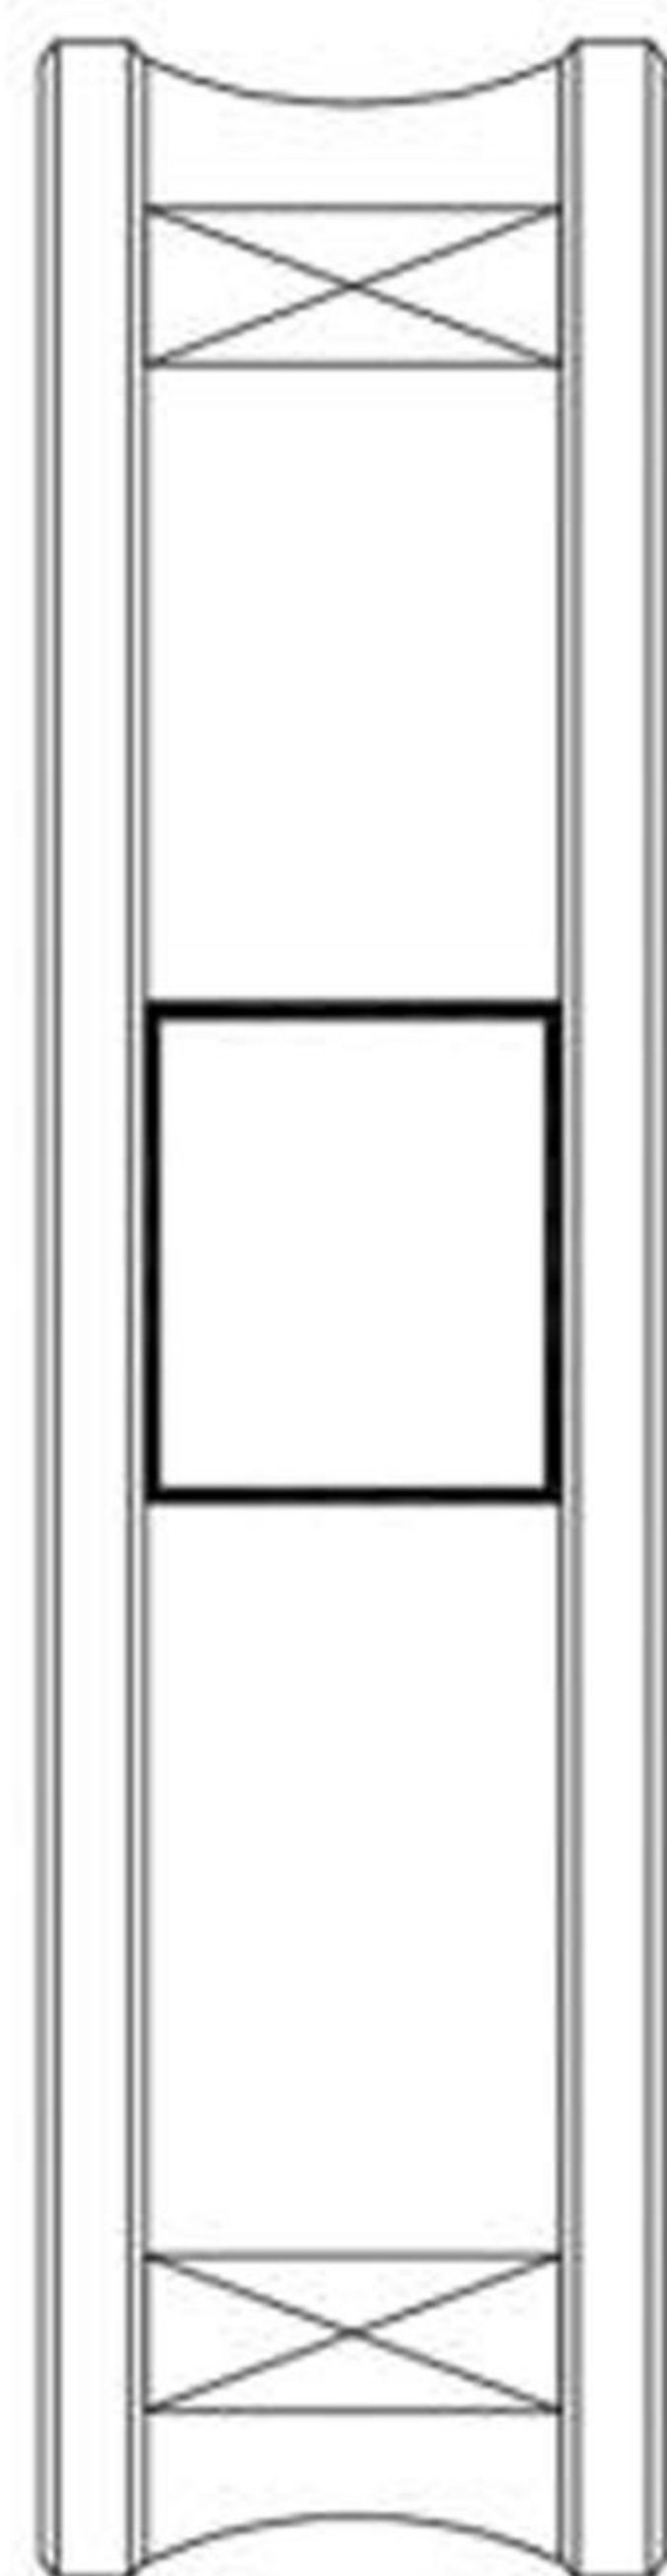

Vertical sliding windows typically have two sashes that can be moved independently, allowing you to control the amount of ventilation. You can open either the top or bottom sash, or both, depending on your needs. This flexibility is especially useful for directing airflow and maintaining a comfortable indoor environment.
