More security

The lock ensures that 1 and 2-leaf house entrance doors and apartment doors made of timber, plastic and metal profiles can be locked and unlocked effortlessly and reliably. When the door is pulled shut, the Automatic latchbolts are immediately triggered automatically and activate the SH bolts. The SH bolts now engage with the frame parts, irrespective of the position of the Automatic latchbolt. The SH bolts move into the top of the frame, which prevents would-be burglars from levering out the door, and also guarantees outstanding functional reliability when lowering the door. The locking elements are secured against being forced back.

More convenience

GU-SECURY Automatic-DR – double burglar protection without even turning a key: the Automatic-DR mechanical self-locking exit device dispenses with manual locking. Simply pull the door shut: the Automatic latchbolt and SH bolt extend automatically when the door engages in the lock.
